

Hynes Ventilation Conditions

- The Hynes Building Management System allows for an integrated monitoring of all equipment associated with the interior climate control of the Hynes.
- The Hynes HVAC System Design for all interior locations consist of large volume Air Handling Units (AHU's) that have roof top air supply.
- These AHU's supply fresh, conditioned, filtered ventilation to Exhibit Halls, interior meeting spaces and all common circulation spaces on multiple floors as interior conditions require.
- These units are able to provide tempered fresh supply air with minimal return air depending temperature and humidity conditions.
- The Hynes AHU's are capable of approximately (8) full air exchanges per hour per location.
- The Hynes has improved its air filtration media to a MERV 13 rated HEPA filter per CDC and OSHA Guidelines.
